APPENDIX I - Distribution of stock by house type and bedroom numbers within each tenure

APPENDIX II – Future Private Stock Flow over three years

APPENDIX III – Future Affordable Stock Flow over three years

1. AREA-BASED SUPPLY / DEMAND ANALYSIS

1.1 Introduction

- 1.1.1 Planning Guidance in PPS3, the Housing Green Paper and the Good Practice Guide on Housing Needs Assessment all emphasise the need for Local Authorities to influence housing delivery to meet gaps in the type of housing within a Borough and to have better information databases to be able to develop delivery strategies, especially at neighbourhood level.
- 1.1.2 The Housing Needs Assessment Survey data has provided a very large database on both supply and demand by location within the Borough and on the planned movement of households over the next five years. This data on “flow” of the stock is vitally important information as between 90% and 95% of all housing requirements are met from the existing stock.
- 1.1.3 Effective use of the data provides a picture of the type and size of units required from the future new delivery programme over the next three years. This is the major tool in addressing imbalances and mismatch between supply and demand / need and therefore addressing the requirements of PPS3.
- 1.1.4 The balancing housing markets model provides a ‘working’ reference document for housing and planning officers. It should be used to deal with new delivery planning for both market and social housing in planning and housing functions. The core aspect of this model is that it is location based and no attempt should be made to draw Borough-wide conclusions from it.
- 1.1.5 All of the data used in the model is drawn from the raw data from the Housing Needs Survey and the specific information in the social sector provided by the Authority. The model takes account of the flow by type, size and location of units from:-
- (a) Supply created by the planned moves of existing households within and outside the Borough.
 - (b) Demand / need from existing households and new household formation within the Borough, by preferred location.
 - (c) The supply created by out-migration and demand from in-migration into the Borough using a Zero Net Migration Model based on the housing choices of in-migrants in the last 12 months, grossed to equal the out migrant household numbers.
- 1.1.6 This report analyses the data and results of the 2006 Dartford Housing Needs Survey and the RSL stock / re-lets data to provide detailed information on:-
- ◆ Size, type and tenure of the existing dwelling stock in each of the five sub areas.
 - ◆ Supply/demand or need impact on stock flow of all moving households to 2009 in each of the five sub areas analysed by house type and size.
- 1.1.7 The purpose of this exercise is to identify over and under supply of specific unit types and sizes by specific location. The data will differ from the vast majority of that in the main Housing Needs Survey which analyses demand and need, but only in total unit terms and takes no account of supply of property by type and size at local level. That is the purpose of this report.
- 1.1.8 The results of the analysis are to provide further detailed information from which to develop site development brief requirements and social housing delivery, with a major objective of addressing stock gaps at local level. It should also be used as an information base to assist in the wider policy and strategy development process, especially in addressing low demand and in stock option appraisal.

1.2 Methodology

1.2.1 A five sub-area structure was used for this analysis and is as follows:

Area 1 (including Heath, Town, West Hill, Joydens Wood)	Area 2 (including Joyce Green, Littlebrook, New Town)
Area 3 (including Princes, Brent)	Area 4 (including Stone, Castle, Greenhithe, Swanscombe)
Area 5 (including Wilmington, Sutton-at-Hone, Bean, Longfield, New Barn, Southfleet)	

1.2.2 For the purpose of this analysis, the terms 'shortfall' and 'surplus' are defined as follows;

Shortfall:- forecast undersupply of a type and size of property (i.e. forecast demand is greater than forecast supply.)

Surplus:- forecast oversupply of a type and size of property (i.e. forecast supply is greater than forecast demand.)

1.2.3 The Appendices comprise data tables relating to three separate elements. **Appendix I** contains simple cross-tabulations of the grossed up data for each sub-area included in the BHM, to show the distribution of stock by house type and bedroom numbers within each tenure. Note that the totals will vary marginally where data is not available for all elements of the cross-tabulation.

1.2.4 The future **private stock** flow over the next three years is analysed in a series of tables in **Appendix II** using supply and demand data from both existing and new forming households in the survey.

1.2.5 The **affordable stock** issue is addressed statistically in **Appendix III** using the Waiting List and re-lets experience in the rented stock and the affordable need identified in the Housing Needs Assessment.

1.2.6 The data is drawn from the Housing Needs Assessment which achieved a confidence level of $\pm 1.91\%$ at the Borough wide scale. This level of sampling error applies to the total stock analysis of distribution in **Appendix I**.

2. FUTURE PRIVATE STOCK FLOW

2.1 Data Methodology

2.1.1 PPG3 issued in March 2000 identifies that the balance of the existing stock structure by type, size and condition, is a critical aspect of meeting the needs of current and future households. Knowledge of existing stock supply and household demand preferences is valuable in being able to address the type and locational distribution of new supply.

Tables in **Appendix II** are as follows:

Table 1 Demand for private sector stock from existing households moving within the Borough

Table 2 Demand for private sector from concealed households moving within the Borough

Table 3 In-Migrant Demand

Table 4 Demand from all households moving / forming within the Borough

Table 5 Supply of private sector stock created by existing households moving within and outside the Borough

Table 6 All private sector stock shortfall/surplus by property size

Table 6a 1 bedroom private stock shortfall/surplus by property type

Table 6b 2 bedroom private stock shortfall/surplus by property type

Table 6c 3 bedroom private stock shortfall/surplus by property type

Table 6d 4+ bedroom private stock shortfall/surplus by property type

Table 6e All bedroom size private stock shortfall/surplus by property type

2.1.2 The Housing Needs Survey data details the reasons for moving households leaving the Borough and over 23% of them are leaving specifically because of employment or better access to work in another area. These factors have been the some of the highest reasons for movement into and out of a Borough in many of our previous surveys.

3. PRIVATE SECTOR TYPE, SIZE AND SUB AREA ANALYSIS

3.1 Area 1 (including Heath, Town, West Hill, Joydens Wood)

Table 3-1 Shortfall/Surplus of Private Stock to 2009 by House Type and Size

Property Type	Bedrooms	Private Stock	
		*Shortfall	**Surplus
Flat	1	84	-
	2	-	22
	3	-	-
	4+	-	-
Bungalow	1	-	-
	2	-	1
	3	31	-
	4+	-	-
House	1	26	-
	2	-	31
	3	-	2
	4+	-	24
All Types	1	110	-
	2	-	54
	3	31	2
	4+	-	24
Total		141	80

* Shortfall of units – Demand is greater than supply for this type.

**Surplus of units – Supply is greater than demand for this type.

3.1.1 Table 3-1 data analysed by size shows that:-

- ◆ **1-bed property:** there is a net shortfall of 110 1-bed market properties in Area 1. This is due predominantly to an undersupply of both 1-bed flats and 1-bed houses leading to shortfalls of 84 units and 26 units, respectively.
- ◆ **2-bed property:** there is a net surplus of 54 2-bed market properties in Area 1, due to an oversupply of 31 2-bed houses and 22 2-bed flats. There is also a negligible one unit surplus of 2-bed bungalows caused by a well balanced supply and demand for the property type.
- ◆ **3-bed property:** there is a net deficit of 29 3-bed market units in this area, from a shortfall of 31 3-bed bungalows due to no supply, combined with a surplus of just two 3-bed houses from well balanced supply and demand.
- ◆ **4+ bed property:** there is a net surplus of 24 4+ bed units in Area 1, wholly relating to an oversupply of 4+ bed houses.

3.1.2 Overall, in terms of all property sizes, there is a net shortfall of 61 market properties in Area 1. The majority of the deficit is created by 1-bed flats, whilst the most significant stock surpluses are seen for 2 and 4+ bed houses and 2-bed flats.

3.2 Area 2 (including Joyce Green, Littlebrook, New Town)

Table 3-2 Shortfall/Surplus of Private Stock to 2009 by House Type and Size

Property Type	Bedrooms	Private Stock	
		*Shortfall	**Surplus
Flat	1	-	140
	2	-	8
	3	-	-
	4+	-	-

	4+	-	21
All Types	1	-	142
	2	-	101
	3	-	33
	4+	-	21
Total		-	297

* Shortfall of units – Demand is greater than supply for this type.

**Surplus of units – Supply is greater than demand for this type.

3.2.1 Table 3-2 data analysed by size shows that:-

- ◆ **1-bed property:** there is a surplus of 142 1-bed market properties in Area 2. This is predominantly caused by an oversupply of 140 1-bed flats combined with a negligible surplus of two 1-bed houses.
- ◆ **2-bed property:** a net surplus of 101 2-bed market properties exists in this area. This results predominantly from high supply levels relative to demand for 2-bed houses leading to a 93 unit surplus of the type. This is combined with a smaller surplus of eight 2-bed flats from a relatively well balanced supply / demand for the type.
- ◆ **3-bed property:** there is a net surplus of 33 3-bed properties in this area. It is caused by a surplus of 29 3-bed houses and four 3-bed bungalows due to slight oversupply of these property types.
- ◆ **4+ bed property:** there is a net surplus of 21 4+ bed properties in this area. This relates wholly to an oversupply of 4+ bed houses.

3.2.2 Overall, in terms of all property types and sizes, there is a net surplus of 297 market properties in this area. 1-bed flats make up almost half of the net surplus, and all sizes of houses are in surplus. There are no private sector stock shortfalls seen in Area 2.

3.3 Area 3 (including Princes, Brent)

Table 3-3 Shortfall/Surplus of Private Stock to 2009 by House Type and Size

Property Type	Bedrooms	Private Stock	
		*Shortfall	**Surplus
Flat	1	-	36

	4+	-	92
All Types	1	20	36
	2	6	-
	3	8	180
	4+	-	92
Total		34	308

* Shortfall of units – Demand is greater than supply for this type.

**Surplus of units – Supply is greater than demand for this type.

3.3.1 Table 3-3 data analysed by size shows that:-

- ◆ **1-bed property:** there is a net surplus of 16 1-bed market properties in this area, caused by an oversupply of 36 1-bed flats combined with a shortfall of 20 1-bed houses resulting from no supply of the type.
- ◆ **2-bed property:** a small net shortfall of six 2-bed market properties exists in this area, with deficits of four 2-bed flats and two 2-bed houses from relatively well balanced supply / demand for both property types.
- ◆ **3-bed property:** there is a large net surplus of 172 3-bed market units in this area, from a large oversupply of 180 3-bed houses, combined with a shortfall of eight 3-bed bungalows due to no supply.
- ◆ **4+ bed property:** there is a net surplus of 92 4+ bed properties in Area 3, wholly relating to 4+ bed houses and caused by an oversupply of the type.

3.3.2 Overall, in terms of all bedroom sizes, there is a net surplus of 274 market properties in this area. 3 and 4+ bed houses contribute most significantly to the general property surplus, with 1-bed houses showing the only significant shortfall in this area.

3.4 Area 4 (including Stone, Castle, Greenhithe, Swanscombe)

Table 3-4 Shortfall/Surplus of Private Stock to 2009 by House Type and Size

Property Type	Bedrooms	Private Stock	
		*Shortfall	**Surplus

	4+	17	-
Total		164	64

* Shortfall of units – Demand is greater than supply for this type.

**Surplus of units – Supply is greater than demand for this type.

3.4.1 Table 3-4 data analysed by size shows that:-

- ◆ **1-bed property:** there is a net shortfall of five 1-bed market properties in Area 4 caused by a slight undersupply of 1-bed flats, leading to a 13 unit shortfall, combined with an oversupply of eight 1-bed houses.
- ◆ **2-bed property:** a small net shortfall of two 2-bed properties exists in this area, and while this net position appears well balanced it is actually caused by an undersupply of 58 2-bed flats combined with an oversupply of 56 2-bed houses.
- ◆ **3-bed property:** there is a net shortfall of 76 3-bed properties in Area 4, relating to an undersupply of 70 3-bed houses and a further deficit of six 3-bed bungalows caused by no supply of the property type in this area.
- ◆ **4+ bed property:** there is a net shortfall of 17 4+ bed market units in this area, wholly relating to 4+ bed houses and resulting from a slight undersupply of the type.

3.4.2 Overall, in terms of all bedroom sizes, there is a net shortfall of 100 market units in Area 4. 1 and 2-bed flats and the 3 and 4+ bed houses show the largest shortfalls, while 1 and 2-bed houses are in net surplus.

3.5 Area 5 (including Wilmington, Sutton-at-Hone, Bean, Longfield, New Barn, Southfleet)

Table 3-5 Shortfall/Surplus of Private Stock to 2009 by House Type and Size

Property Type	Bedrooms	Private Stock	
		*Shortfall	**Surplus

	4+	198	-
Total		621	17

* Shortfall of units – Demand is greater than supply for this type.

**Surplus of units – Supply is greater than demand for this type.

3.5.1 Table 3-5 data analysed by size shows that:-

- ◆ **1-bed property:** there is an overall net deficit of 1-bed market properties in Area 5, totalling 122 units. This relates to shortfalls of 72 1-bed flats and 50 1-bed houses due to no supply of these types in this area.
- ◆ **2-bed property:** a net shortfall of 166 2-bed properties exists in Area 5. This is caused by a large deficit of 160 2-bed houses caused by undersupply of the type and a smaller undersupply of nine 2-bed bungalows. These shortfalls are combined with a small surplus of three 2-bed flats from relatively well balanced supply / demand.
- ◆ **3-bed property:** there is a net deficit of 118 3-bed properties in this area. There are shortfalls of 3-bed bungalows (70 units) and 3-bed houses (62 units) due to undersupply in both cases, whilst there is a surplus of 14 3-bed flats caused by no demand for the type.
- ◆ **4+ bed property:** there is a net shortfall of 198 4+ bed market units in Area 5, from a shortfall of 171 4+ bed houses, and 27 4+ bed bungalows, both caused by low supply of the types in relation to demand in this area.

3.5.2 Overall, in terms of all bedroom sizes, there is a net shortfall of 604 market properties in Area 5. 2 and 4+ bed houses make up the largest proportion of deficit, with 2 and 3-bed flats the only property types showing small net surpluses.

3.6 Borough wide

Table 3-6 Shortfall/Surplus of Private Stock to 2009 by House Type and Size

Property Type	Bedrooms	Private Stock	
		*Shortfall	**Surplus

	4+	51	-
All Types	1	86	7
	2	37	18
	3	111	93
	4+	78	-
Total		312	118

* Shortfall of units – Demand is greater than supply for this type.

**Surplus of units – Supply is greater than demand for this type.

3.6.1 Table 3-6 data analysed by size shows that:-

- ◆ **1-bed property:** there is a net shortfall of 79 1-bed properties across Dartford Borough, from a net shortfall of 1-bed houses totalling 86 units due to undersupply, combined with well-balanced supply and demand for 1-bed flats with a seven unit surplus.
- ◆ **2-bed property:** there is a small net deficit of 19 2-bed market properties across Dartford Borough, from relatively well balanced supply and demand for 2-bed flats and 2-bed houses, resulting in a 29 unit shortfall and 18 unit surplus respectively for the types. There is also a slight undersupply of eight 2-bed bungalows.
- ◆ **3-bed property:** there is a net shortfall of 18 3-bed market properties across Dartford Borough, made up of an undersupply of 111 3-bed bungalows, combined with surpluses of 79 3-bed houses and 14 3-bed flats, from relatively well balanced supply / demand and no demand respectively for the types.
- ◆ **4+ bed property:** there is a net shortfall of 78 4+ bed properties across the Dartford Borough, mainly relating to a deficit of 51 4+ bed houses from relatively well balanced supply / demand, combined with a net shortfall of 27 4+ bed bungalows due to low supply.

3.6.2 Overall, in terms of all bedroom sizes, there is a net deficit of 194 market properties across Dartford Borough. Large shortfalls of 3-bed bungalows and 1-bed houses exist, while 3-bed houses make up the majority of the net surplus.

4. ASSESSMENT OF AFFORDABLE ACCOMMODATION SHORTFALL

4.1 Data Methodology

- 4.1.1 The detailed area figures are derived from the 2006 Housing Needs Survey and relates to the period between 2006 and 2009. These affordable stock figures are based on waiting list data and re-let experiences within Dartford Borough Council (2005/2006). Some affordable need data from those not on the waiting list is derived from our survey.
- 4.1.2 It should be noted that this model is to determine house type and size imbalances by locality **and is not a calculation of the scale of affordable need**. This is done in the main Housing Needs Assessment Report. DCA have therefore incorporated the type / size needs data from the whole Waiting List in this analysis whereas the main assessment is an annual flow structure only.
- 4.1.3 The tables within **Appendix III** are as follows:-
- Table 7** DBC and RSL rented re-lets by size, type and location
- Table 8** Waiting List and New Affordable need by size and location
- Table 9** Waiting List New Registrations by size and location
- Table 10** Total social stock shortfall/surplus
- Table 10a** 1 bedroom social stock shortfall/surplus
- Table 10b** 2 bedroom social stock shortfall/surplus
- Table 10c** 3 bedroom social stock shortfall/surplus
- Table 10d** 4 bedroom social stock shortfall/surplus
- Table 10e** All bedroom sizes social stock shortfall/surplus.
- 4.1.4 It is normal to have a large shortfall in the affordable sector because the whole Waiting List backlog is included and supply is low relative to current need. Where 'no supply' is stated as a reason it is based on the last years experience that there were no re-lets of that property type in the area to address need.
- 4.1.5 The figures reflect national experience of low levels of 4+ bed stock in the social rented sector.
- 4.1.6 The Waiting List information is obtained from Dartford Borough Council, with new affordable demand figures obtained from our survey data.
- 4.1.7 The data includes some social sector demand from in-migrants, but it is not representative of true in-migrant demand for social stock.

5. AFFORDABLE SECTOR TYPE, SIZE AND SUB AREA ANALYSIS

5.1 Area 1 (including Heath, Town, West Hill, Joydens Wood)

Table 5-1 Shortfall/Surplus of Affordable Stock to 2009 by House Type and Size

Property Type	Bedrooms	Affordable Stock	
		*Shortfall	**Surplus
All Types (due to lack of specific type data)	1	560	-
	2	285	-
	3	185	-
	4+	37	-
Total		1,067	-

* Shortfall of units – Demand is greater than supply for this type.

**Surplus of units – Supply is greater than demand for this type.

5.1.1 The data in Table 5-1 analysed by size shows that:-

- ◆ **1-bed property:** there is a net shortfall of 560 1-bed affordable properties in Area 1, due to an undersupply in relation to demand from waiting list applicants and new affordable households in this area.
- ◆ **2-bed property:** there is a net deficit of 285 2-bed affordable properties in this area. This is caused by low supply of the type relative to demand from new affordable households and waiting list applicants in this area.
- ◆ **3-bed property:** there is a net shortfall of 185 3-bed affordable properties in Area 1, wholly relating to no supply of the property type to meet waiting list and new affordable demand.
- ◆ **4+ bed property:** there is a deficit of 37 4+bed affordable units in this area relating to no supply of the property type.

5.1.2 Overall, in terms of all bedroom sizes, there is a net deficit of 1,067 affordable properties in Area 1, the smallest deficit of affordable units seen across the Borough. Just over half the shortfall relates to 1-bed units, with smaller shortfalls of larger property types.

5.2 Area 2 (including Joyce Green, Littlebrook, New Town)

Table 5-2 Shortfall/Surplus of Affordable Stock to 2009 by House Type and Size

Property Type	Bedrooms	Affordable Stock	
		*Shortfall	**Surplus
All Types (due to lack of specific type data)	1	348	-
	2	244	-
	3	126	-
	4+	39	-
Total		757	-

* Shortfall of units – Demand is greater than supply for this type.

**Surplus of units – Supply is greater than demand for this type.

5.2.1 Data analysed in Table 5-2 by size shows that:-

- ◆ **1-bed property:** there is a net shortfall of 348 1-bed affordable properties in Area 2, due to low supply in relation to demand for the property type in this area.
- ◆ **2-bed property:** there is a net deficit of 244 2-bed affordable properties in Area 2, from an undersupply of the property type in relation to current and forecast demand from waiting list applicants and new affordable households.
- ◆ **3-bed property:** there is a net shortfall of 126 3-bed affordable properties in this area, due to low forecast supply of units combined with a current and forecast demand from waiting list applicants and new affordable households.
- ◆ **4+ bed property:** there is a net deficit of 39 4+ bed affordable units in this area, wholly relating to no supply of the type to meet demand from waiting list applicants.

5.2.2 Overall, in terms of all bedroom sizes, there is a net shortfall of 757 affordable properties in Area 2. The majority of the deficit relates to 1 and 2-bed units, with lower demand levels for 3 and 4+ bed properties.

5.3 Area 3 (including Princes, Brent)

Table 5-3 Shortfall/Surplus of Affordable Stock to 2009 by House Type and Size

Property Type	Bedrooms	Affordable Stock	
		*Shortfall	**Surplus
All Types (due to lack of specific type data)	1	1,044	-
	2	339	-
	3	351	-
	4+	55	-
Total		1,789	-

* Shortfall of units – Demand is greater than supply for this type.

**Surplus of units – Supply is greater than demand for this type.

5.3.1 Data analysed in Table 5-3 by size shows that:-

- ◆ **1-bed property:** there is a significant net shortfall of 1,044 1-bed affordable properties in Area 3, the largest deficit of 1-bed affordable units seen across the Borough. It is caused by low supply combined with high levels of new affordable and waiting list demand.
- ◆ **2-bed property:** there is a net deficit of 339 2-bed affordable properties in this area, due to undersupply of the type compared to a current and forecast demand.
- ◆ **3-bed property:** there is a net shortfall of a 351 3-bed affordable properties in Area 3, as a result of an undersupply of the property type relative to demand.
- ◆ **4+ bed property:** there is a net deficit of 55 4+ bed affordable properties in this area due to no supply of the property type.

5.3.2 Overall, in terms of all bedroom sizes, there is a net shortfall of 1,789 affordable properties in this area. The majority of the deficit relates to 1-bed properties at 1,044 units, followed by 2 and 3-bed units.

5.4 Area 4 (including Stone, Castle, Greenhithe, Swanscombe)

Table 5-4 Shortfall/Surplus of Affordable Stock to 2009 by House Type and Size

Property Type	Bedrooms	Affordable Stock	
		*Shortfall	**Surplus
All Types (due to lack of specific type data)	1	712	-
	2	322	-
	3	210	-
	4+	57	-
Total		1,301	-

* Shortfall of units – Demand is greater than supply for this type.

**Surplus of units – Supply is greater than demand for this type.

5.4.1 Data analysed in Table 5-4 by size shows that:-

- ◆ **1-bed property:** there is a net shortfall of 712 1-bed affordable properties in Area 4, due an undersupply of the property type in relation to demand from waiting list applicants new affordable households.
- ◆ **2-bed property:** there is a net shortfall of 322 2-bed affordable properties in this area, due to an undersupply of the property type in relation to forecast demand from new affordable households and, in particular, waiting list applicants.
- ◆ **3-bed property:** there is a net deficit of 210 3-bed affordable properties in this area, due to low supply in relation to demand levels for the property type.
- ◆ **4+ bed property:** there is a shortfall of 57 4+ bed affordable properties in Area 4. This is caused by no supply of the type.

5.4.2 Overall, in terms of all bedroom sizes, there is a net shortfall of 1,301 affordable properties in Area 4. The majority of the deficit relates to 1-bed units, with lower demand levels for 2, 3 and, in particular 4+ bed properties in this area.

5.5 Area 5 (including Wilmington, Sutton-at-Hone, Bean, Longfield, New Barn, Southfleet)

Table 5-5 Shortfall/Surplus of Affordable Stock to 2009 by House Type and Size

Property Type	Bedrooms	Affordable Stock	
		*Shortfall	**Surplus
All Types (due to lack of specific type data)	1	969	-
	2	512	-
	3	442	-
	4+	125	-
Total		2,048	-

* Shortfall of units – Demand is greater than supply for this type.

**Surplus of units – Supply is greater than demand for this type.

5.5.1 Data analysed in Table 5-5 by size shows that:-

- ◆ **1-bed property:** there is a significant net shortfall of 969 1-bed affordable properties in Area 5, due to a large undersupply in relation to demand for the property type in this area.
- ◆ **2-bed property:** there is a net deficit of 512 2-bed affordable properties in this area, from a low supply relative to a large waiting list demand combined with new affordable households.
- ◆ **3-bed property:** there is a net shortfall of 442 3-bed affordable properties in Area 5, relating to an undersupply in relation to demand for this property type.
- ◆ **4+ bed property:** there is a net deficit of 125 4+ bed affordable units in this area, due to no supply of the property type.

5.5.2 Overall, in terms of all bedroom sizes, there is a net deficit of 2,048 affordable properties in this area, the largest shortfall of affordable units seen across the Borough. The deficit of 1-bed units alone accounts for nearly half of the overall shortfall, with 2 and 3-bed units making up almost all the remainder of outstanding need.

5.6 Borough wide

Table 5-6 Shortfall/Surplus of Affordable Stock to 2009 by House Type and Size

Property Type	Bedrooms	Affordable Stock	
		*Shortfall	**Surplus
All Types (due to lack of specific type data)	1	3,633	-
	2	1,702	-
	3	1,314	-
	4+	313	-
Total		6,962	-

* Shortfall of units – Demand is greater than supply for this type.

**Surplus of units – Supply is greater than demand for this type.

5.6.1 Data analysed in Table 5-6 by size shows that:-

- ◆ **1-bed property:** there is a significant net shortfall of 3,633 1-bed affordable properties across the Dartford Borough, due insufficient supply in relation to demand, mainly from waiting list applicants, for the property type.
- ◆ **2-bed property:** there is a large net deficit of 1,702 2-bed affordable properties across the Borough, from very low supply of the property type in relation to current and forecast demand from the waiting list and new affordable households.
- ◆ **3-bed property:** there is a net shortfall of 1,314 3-bed affordable properties across the Borough, due to a low supply relative to high demand levels.
- ◆ **4+ bed property:** there is a net deficit of 313 4+ bed properties across the Borough, due to no supply of the property type in any area.

5.6.2 Overall, in terms of all bedroom sizes, there is a large net shortfall of 6,962 affordable properties across the Dartford Borough over the three years to 2009. Large deficits of 1-bed units exist, making up over half of the overall deficit. The shortfalls of 2 and 3-bed units are 1,702 and 1,314 units respectively. A much smaller deficit is forecast for 4+ bed units at 313, though there is no forecast re-let supply of the type arising in any area.

6. SUMMARY OF SURPLUSES / SHORTFALLS BY AREA

	Type	Bedroom Size	Private Sector		Affordable Sector	
			*Shortfall	**Surplus	*Shortfall	**Surplus
Area 1 (including Heath, Town, West Hill, Joydens Wood)	All Types (due to lack of specific type data)	1	110	-	560	-
		2	-	54	285	-

		2	166	-	512	-
		3	118	-	442	-
		4+	198	-	125	-
Total			604	-	2,048	-
Overall Total			849	655	6,962	-

* Shortfall of units – Demand is greater than supply for this type.

**Surplus of units – Supply is greater than demand for this type.

7. CONCLUSIONS

7.1 Key Data

7.1.1 The key data emerging from the analysis to inform future planning, housing and regeneration delivery strategies is as follows:-

7.2 Private Sector Stock Supply / Demand Analysis

- ◆ Demand for 1-bed stock exceeds supply by a significant margin in Area 1 and Area 5. The majority of the deficit in these areas relates to 1-bed flats and 1-bed houses. Surpluses of 1-bed stock are evident in Area 3 and, in particular, Area 2 with oversupply mainly relating to flats in these areas.
- ◆ Shortfalls of 2-bed stock exist in Area 3, Area 4 and Area 5. In areas of 2-bed deficit, generally shortfalls exist for 2-bed houses, while for other areas surpluses more generally relate to both 2-bed flats and 2-bed houses. There is very little supply or demand for 2-bed bungalows across the Borough.
- ◆ 3 bedroom units are generally in net deficit, particularly in Area 4 and Area 5. Significant surpluses do exist, however, in Area 3, mainly relating to 3-bed houses.
- ◆ Surpluses of 4+ bed stock exist in all areas of Dartford, apart Area 4 and Area 5 where deficits of 4+ bed houses and bungalows exist. In Area 5, where the largest deficit of 4+ bed stock exists, demand levels for 4+ bed houses are over 50% higher than supply. On the whole supply and demand for larger 4+ bed units is associated with houses, though there is some demand for 4+ bed bungalows in Area 5.

7.3 Affordable Supply / Demand Analysis

- ◆ There is a significant stock shortfall of 1-bed properties, 3,633 units in total. This is most prominent in Area 3 and Area 5, where over half the Borough-wide 1-bed affordable stock deficit exists due to very limited supply of units in these areas.
- ◆ Around 55% of the overall net shortfall of affordable housing across the Borough arises in Area 5 and Area 3.
- ◆ The majority of the net total shortfall in Area 5 and Area 3 relates to 1 and 2-bedroomed accommodation.
- ◆ 3-bed deficit is highest in Area 5 and Area 3. Demand for 3-bed stock across the Borough is around nine times the supply level of 3-bed stock.
- ◆ Across the Borough there is no supply of 4+ bed stock to meet the demand expressed by waiting list applicants and new affordable households identified in our survey.

8. RECOMMENDATIONS

8.1 Changing Household Profiles

- 8.1.1 In planning the provision of a housing stock that meets the need of all households in the future we need to consider changes which are taking place in both demographic structure and household formation and preferences. The data in relation to household formation is extremely important as those households requiring smaller units are those which are growing most significantly.
- 8.1.2 The needs of new forming households are certainly more basic than aspirational in that very high proportions are looking for small units of accommodation.
- 8.1.3 Key facts from the Housing Needs Assessment Study show that:-
- ◆ 62% of new **single households** need one bedroom units
 - ◆ 45% of new **couple households** need two bedroom units
 - ◆ 38% of **all new forming households** need two bedroom units
 - ◆ 51% of **all new forming households** need one bedroom units
- 8.1.4 From the last two bullet points it is evident therefore that around 89% of new forming households are looking to occupy one or two bedroom units which represent only 38% of the housing stock.
- 8.1.5 The impact of this stock imbalance is to create further difficulty for new forming households attempting to access the housing market in Dartford. The rate of turnover required in the smaller one and two bedroom stock is excessive.

8.2 Future Delivery

- 8.2.1 Despite the scale of future demand, it is not sustainable or deliverable in market terms to build all new stock in one or two sectors of the market. There is need however, for new low cost market housing. Planning policies and site development briefs should continue to address the shortage of 1 and 2-bed affordable houses and modern flats in the current stock.
- 8.2.2 Sustainable development is we believe the key issue. In determining stock mix requirements by size (and type) we recommend that a wider 'neighbourhood' approach is used, principally using existing service provision as a boundary basis. School utilisation and/or the need for additional facilities would be the principal determinant along with access to shops and medical services.
- 8.2.3 In determining an appropriate mix for a particular site, taking account of the fact that all allocated sites are large enough to create a reasonably balanced community, we believe that the existing surrounding or local stock mix should be taken into account so that the local area should become more balanced and sustainable after the site is completed.
- 8.2.4 In terms of new affordable stock need, current stock re-let levels are not able to meet the scale of need, and mismatches occur, as they do with private sector purchasers over house type, size and location.
- 8.2.5 Existing re-lets are low in relation to current demand which is creating large one and two-bed social stock shortfalls. Regeneration is a major strategic factor here, by improving neighbourhoods and embracing the local facilities and environment, a more balanced community can be achieved.

- 8.2.6 Site development briefs and regeneration initiatives of both market and social stock should attempt to ensure that all housing in both sectors is provided to meet the needs of all households (existing and concealed) on an adequate scale. In terms of the housing market there is a clear scale of demand from both existing and new forming households for smaller units to meet the aspirations of new forming households as highlighted in sections 8.3 and 9.3 of the main survey report especially in Area 3 and Area 5.
- 8.2.7 The surplus of existing available 3 and 4+ bed private stock in some areas is such that it should meet demand from local people looking for larger accommodation in those areas, e.g. Area 2 and Area 3.
- 8.2.8 It may be necessary to maintain supply of larger affordable properties for low income families especially Area 3, Area 4 and Area 5.
