WHAT IS INCLUDED AND WHY

The Willow Road play area has been designed to make the most of the existing space while creating a fun, bright and open area that children of all ages and abilities will be able to use for years to come.

WILLOW ROAD SPECIFIC SITE PREPARATION

- Site Drainage
 Currently the site has an issue with standing water creating puddles around the equipment. To combat this, we have included new drainage holes. These are to be drilled into the existing pads.

- Site Barriers & Openness
 At the moment, the play area is divided into a number of different spaces using heavy barriers. We have removed all of these barriers to open up the space and make access much easier for people in wheelchairs. These barriers are no longer needed as we have grouped the swings together and positioned them at the back of the playground, removing the need for barriers.

SENSORY PLAY AREA & PLANTING

Creating a space for experiences
 Not only do play areas need to be fun and engaging, they also have to offer a wide range of sensory experiences that benefit the development of children. We have created a sensory zone to provide tactile, visual, auditory and cognitive stimulation. A communication panel has also been included to help non-verbal visitors express their needs.

ADDED & SOCIAL VALUE

- Here at Proludic we like to ensure that when creating new play spaces we also help to improve both the lives of people in the area and the environment itself. Here are a few ways we are doing just that.
- Donation to DRIPS (Darent River Preservation Society)
 - Creation of Wild flower Sensory Area
 - Carbon Offset to reduce environmental impact
 - Post Installation Inspection

YOUR NEW PLAY EQUIPMENT

- | | |
|----------------------------|---------------------------------|
